Good. Now there's undeniable proof they've been notified.

Thank you Jill, I am copying the FSMs and our FM, Stephen. He will pass this on to the DMs so they can communicate to the stores .

Subject: Missing Pest control devices

Hi Margaret,

It is being reported by my technicians that some stores are either relocating or removing our pest control devices (snap traps, multicatch rodent traps, monitors, fly fruit traps). Where possible, we label

the devices with "do not touch" stickers and its printed on workorders not to disturb the devices. Devices that are placed out of reach, so they're not disturbed during cleaning and/or when placed in secluded areas, are still found moved or missing. Any missing devices are noted on workorders at time of service.

We also note on workersorders when we find dichlorvos strips (No Pest Strips) as they are not labled for use in food establishments. These are mostly found in FOH under counters hanging from pipes or on floor, on top of high cabinets near vents, one was recently found inside a pastrycase.

Please let me know if you any questions.
